

Topographic Map of 2016 BioBlitz Study Area

Distances are identified on the various sections of tracks that provide walking access through the study area. While it is not critical to record locations of more common species, (For example, Scribbly Gums, Brown Honeyeater, etc) the Official Recorders from the University of the Sunshine Coast are keen to know the locations of unusual sightings or records to check if they have previously been recorded from Fraser Island and specific locations for the record.
